

【 Important Notice: Upgrade Your SDK! 】

ThroughTek Co., Ltd. (hereinafter referred to as TUTK) has been dedicated to providing P2P connectivity cloud services and custom solutions for more than a decade. With the rapid development of the network environment and information technology, the physical server hardware used in the early years has become outdated, resulting in unstable connection between the end devices (client) and the server. Because of this we will be making some changes, and will require minimal action on your part to make the transition as smooth as possible. We ask that you discontinue use of TUTK software and or software in devices released by manufacturers more than four years ago, and upgrade to the latest version.

Upgrade Your SDK to the latest version:

- Your SDK is 1.14.0.0 or older and you are using a version released before April of 2015
- You are using software of a device released by a manufacturer more than four years ago (before April of 2015)

TUTK will continue to work with our vendors to maintain old servers, however, we cannot guarantee that our new servers will fully support old SDK versions. Therefore, we strongly recommend that our users to upgrade to the latest SDK version as soon as possible. If you need assistance from TUTK to help determine whether you need an upgrade, please contact our technical support team or sales team.
